

CLIENT-READY FRAMEWORK PACK · V1.0

BUSINESS AGENT HARNESS PACK

This pack explains, installs, and trains a business-ready AI agent harness using Discord as the shared operating room.

Pack contents

File	Audience	Purpose
01-external-client-framework.md	Business owners / managers	Plain-English explanation of what the harness is, how rollout works, and how governance is included.
02-internal-implementation-framework.md	Michael / implementation team	Technical operating framework, configuration model, safety protocols, monitoring, and handover of control.
03-onsite-install-discord-permissions-guide.md	Installer + business admin	Step-by-step day-of-install guide for setting up Discord, roles, permissions, agents, and acceptance tests.
04-business-training-guide-discord-agents.md	Business users	How staff should ask for help, how to use the harness to get work, give feedback, and how to report issues on Discord.
05-templates-and-checklists.md	Both	Reusable templates: discovery call, access register, agent card, training agenda, acceptance tests.

Positioning

The agent harness is not “a chatbot”. It is a governed operating layer where staff can request work, agents can help, and managers can see receipts, approvals, and boundaries.

Default stance

- Start narrow.

- Keep humans in approval loops.
- Give agents small keyrings, not master keys.
- Make work visible in channels, not hidden in private DMs.
- Use daily summaries and incident logs so trust is earned.
